The Tiger that swallowed the boy
exotic animals in Victorian England

John Simons

Research output Book/Report › Book

Abstract
Looking at zoological gardens, private menageries, circuses, and natural history museums, this fascinating account explores the surprising extent of the exotic-animal trade in 19th-century England and its colonies. Filled with entertaining anecdotes—from the tiger that prowled down St. George's Street in London with a boy in its mouth and the polar bear that killed a dog in Liverpool to the kangaroos hopping around the lawns of stately homes and the boa constrictor who got loose in Tunbridge Wells—this book also shares how the animals played a key role in the project to ensure that leisure was educational. As it demonstrates how the trade was intimately connected with the tides of Empire, it will be of interest to academics and general readers alike.

Filled with entertaining anecdotes—from the tiger that prowled down St. George’s Street in London with a boy in its mouth and the polar bear that killed a dog in Liverpool to the kangaroos hopping around the lawns of stately homes and the boa constrictor who got loose in Tunbridge Wells—this book also shares how the animals played a key role in the project to ensure that leisure was educational. Interesting review of Victorian menageries, zoo and private animal collections but the writing is bit too scholarly. About this book. The Tiger That Swallowed the Boy asks an important question: If you were born in rural England in 1837 and died in 1901 and never travelled more than thirty miles in any direction would you have seen a hippopotamus before you died? The answer is, surprisingly, yes. In fact, the roads of England were thronged with all manner of creatures. There were even exotic butterfly farms. Kangaroos hopped around the lawns of stately homes, tigers prowled the backstreets of the East End, a tapir terrorised the people of Rochdale, an angry cassowary pursued a Lord as he was out for his dail Victorian England means just that and the main focus of the book is on the years 1837 to 1901. There is, of course, some address to the presence of exotic animals in earlier periods in things like the Tower and Exeter Change menageries and the early years of the touring and private menageries. The book tries to trace the complete cycle of the exotic animal phenomenon in Victorian England. Significant attention is paid to the trade in animals and, in particular, the business structure of the Jamrach family firm, which dominated the English trade for the second half of the nineteenth century, is set out in detail, I believe for the first time.
