Abstract
This volume is part of a final report on social science aspects of fisheries management in New England and is divided into three sections. In Section I, general background information is given concerning aspects of the fisheries in northern New England. Included is a history of fishing in the area, general information on the coastal environment and biology of major species caught and a background on fishing boats and gear, marketing and processing, and the legal environment. Section II describes each of the ports in Maine and New Hampshire, as they were in the baseline year of 1978, outlining the physical setting and population, the major industries, general infrastructure, and port infrastructure. Section III describes the local variations in the fishing industry of northern New England. This is done, in the maine, by presenting a statistical summary of the information contained in the port descriptions. (Sinha - OEIS)

The original 13 colonies were divided into three geographic areas consisting of the New England, Middle and Southern colonies. The New Hampshire Colony was classified as one of the New England Colonies. The Province of New Hampshire was an English colony in North America that existed from 1638 until 1776, when it joined the other 12 of the 13 colonies in rebellion against Great Britain and became the U.S. state of New Hampshire. The Colony became a state on June 21, 1788. For additional facts and info refer to the Change from Colonies to States. Facts. Subject. Facts about the New Hampshire Colony.
