Safety of magnetic resonance imaging in patients with cardiovascular devices: an American Heart Association scientific statement from the Committee on Diagnostic and Interventional Cardiac Catheterization, Council on Clinical Cardiology, and the Council on Cardiovascular Radiology and Intervention: endorsed by the American College of Cardiology Foundation, the North American Society for Cardiac Imaging, and the Society for Cardiovascular Magnetic Resonance. and On behalf of the American Heart Association Council on Cardiovascular Disease in the Young; Council on Genomic and Precision Medicine; and Council on Peripheral Vascular Disease. Michael Silberbach. Michael Silberbach. The presentations and management of cardiovascular conditions in Turner syndrome differ significantly from the general population. Therefore, an international working group reviewed the available evidence regarding the diagnosis and treatment of cardiovascular diseases in Turner syndrome. It is recognized that the suggestions for clinical practice stated here are only the beginning of a process that must also involve the establishment of quality indicators, structures and processes for implementation, and outcome studies. The American Heart Association and American Stroke Association publish medical guidelines and scientific statements on various cardiovascular disease and stroke topics. AHA/ASA volunteer scientists and healthcare professionals write the statements. The statements are supported by scientific studies published in recognized journals and have a rigorous review and approval process. Scientific statements generally include a review of data available on a specific subject, an evaluation on its relationship to overall
cardiovascular disease science, and often an AHA/ASA position on the basis of that
