Abstract
In this paper we show how industrialists in an innovation workshop employ tangible material – a toy train set – to innovate their business model. In multidisciplinary teams the process of co-creating new understandings is crucial for work to progress. Based on video data form this participatory innovation session, we investigate how participants get to new concepts through analysing their skilled behaviours, movements, actions and negotiations. We observe that the final result of the workshop is indeed innovative and is co-constructed by all group members. We show why the toy train works: While encouraging group discussion of the ‘customer journey’, it keeps both hands and mind busy, it allows silent participation, and it expands the vocabulary of the discussion.
Read a blogpost about being innovative in business to practise and improve your reading skills. Not all innovation will bring success to our businesses, but it can give us the opportunity to grow and learn more about what we do and what our customers might want. Task 1. Technological innovations result in the improved lifestyles, and hence consumerism increases and thereby results in more employment opportunities. For example, the industrial revolution created more jobs than it eliminated. If we take the example of 3D printing technology, building houses by 3D printing is a great technological innovation. It’s just that the workers should be given training for the newly created jobs. If the government takes care of the reskilling of low-skilled workers, we can take advantage of the impact of technology on jobs. Due to technology, demand for technically skilled youth is increasing and hence more jobs available for educated youth. This can solve the problem of educated unemployment to some extent. Although Business English students can be more willing to do boring but useful topics than most students if they need English for their job, just as often Business students need the same kind of games as other classes get to help them relax around their colleagues who are also their classmates, get their energy levels [...] 15 most fun Business English lessons. "Different types of toys give different messages about what's appropriate for boys and girls to do, and have different educational context - both elements are important and might have a bearing on schooling and career choices later," she says. A small study she conducted found boys tended to be given toys that involved action, construction and machinery, while girls were steered towards dolls and perceived "feminine" interests, such as hairdressing.
