Accounting & Financial Management

The research presented in this book was first requested by the Accounting Standards Committee and sponsored by the Research Board of the Institute. The original focus of the research was to investigate the question of whether or not accounting standards and the disclosure rules of company law placed an undue burden on small businesses. However, the research team soon formed the view that to obtain a proper perspective on the issues, it needed to broaden the study to consider also the usefulness of small companies’ annual accounts, and indeed the diverse roles which accountants play in serving their small business clients. The research shows that some standards and legal requirements command general acceptance while others are seen with little enthusiasm. This will not cause much surprise to accountants who are involved day to day in assisting small companies, though for them the research may serve the useful function of providing firm information about issues of central importance to their work; for others, with less experience of small companies, the results may be more surprising.

Financial reporting is the disclosure of important financial information & other activities of the organization to various stakeholders (investors, creditors/bankers, public, regulatory agencies, and government) for helping them get the idea about the actual financial position of the organization at any point in time. In today’s economy of the world, we have a well-developed banking ecosystem and capital markets; there is a separate ecosystem of investors, venture capital funds, etc. Let us call them Entities with Financial Resources. On the other hand, there are well-developed Financial reporting... Purpose of Financial Reporting.

To highlight the achievements of the company periodically. The purpose of a financial analysis report is to present company financial information in a way that is useful and easy to understand. At a minimum, financial analysis reports analyze trends and changes in company performance. Most financial analysis reports also incorporate competitor data and compare company performance to industry standards. After identifying big-ticket items, analyze the income statement and balance sheet using horizontal analysis to identify smaller changes. To perform horizontal analysis, express each account value is as a percentage of the account value in the oldest financial statement. For example, if a business has assets of $500 in 2010 and $750 in 2011, the analyst would list assets as 100 percent in 2010 and 150 percent in 2011. Financial Reporting involves the disclosure of financial information to the various stakeholders about the financial performance of company. Learn about it in detail here. Both this reporting are important and are an integral part of Accounting & reporting system of an organization. But considering the number of stakeholders involved and statutory & other regulatory requirements, Financial Reporting is a very important and critical task of an organization. It is a vital part of Corporate Governance. Let's discuss various aspects of Financial Reporting in the following paragraphs. Become an expert in financial reporting.
