Keywords: Exotic species, introduced species, forest history, arboreta, nursery, garden design, landscape gardens.

Abstract

In contrast to the 33 species which occur naturally, several hundred exotic or introduced species are represented in Ireland. From the 1600s, tree species from the temperate regions of the world have been cultivated in Irish parks and demesnes. In the 18th and 19th century, plant collections were established by private owners who were keen to plant recently introduced species. In this century, tree collections were established by private individuals, the State and by local authorities. Trees were planted in arboreta, such as the John F. Kennedy Arboretum, Co. Wexford, or in informal Robinsonian style gardens, such as Mount Usher Gardens in Co. Wicklow. Some 35 collections are extant on this island. Collections such as those at Powerscourt, Co. Wicklow, Birr Castle, Co. Offaly, and Castlewellan in Co. Down, are of international repute. While the tree collection are important tourist destinations, attracting some 700,000 visitors annually, the also represent a resources for the nursery industry and for genetic and taxonomic studies, and are an integral part of garden design.

Northern Ireland. Tree Planting Land. Lake and rivers. A Guide to Tree Identification. It is possible to identify many of our native trees by looking at their leaves. Strictly speaking, identification should involve examination of the flowers (petals, sepals, stamens etc), which are less variable than leaves. However, in most cases, it is possible to make an identification using just a few features of the leaves and twigs. We are developing a series of guides to help you identify individual tree species on the right. In more mature trees, another feature that can help in identification is the bark. The bark protects the underlying tissues from damage. The outermost part of the bark consists of dead cells and often has a characteristic colour and texture. Next Day Delivery in Ireland. Shop Online for Damson Trees. Wide Range of Fruit Trees Available to Buy. Rep. of Ireland & Northern Ireland Only. This services comes with text alerts and timed delivery slots which the customer can change to suit themselves. ‘Seed’ Postal Delivery Option ***. Cost is €2 - Packet of Seeds ONLY Orders. Note: Does Not Apply to Seed Potatoes, Bulbs or Sets ***. Rep. of Ireland & Northern Ireland Only. Great Britain. Cost is €10. Trees are the oldest and largest living things around us. Their presence in our gardens is an inspiration and brings life, colour and fragrance throughout the seasons. The gift of a tree is perfect for almost any occasion and at Treeco we aim to ensure your gift has the "WOW" factor. Each tree is carefully gift wrapped in hessian and information labels are attached which give the tree's description, planting instructions and also each trees unique historic uses and the ancient Irish folklore associated with it. Theres also the option of leaving a personalised message for the gif Ireland has the lowest tree cover in Europe. Help us plant, promote, protect and increase awareness about trees, hedgerows and woodlands in Ireland. Ireland has the lowest tree cover of all European countries! Ireland has just 11% of its land covered with trees. Native trees cover just 2% of Ireland. Most native Irish woodlands are tiny. The majority of the Ireland's forests are conifer plantations from the twentieth century. In Europe, forests cover around 35% of the land area. Trees absorb carbon dioxide and release oxygen. Woodland are home to thousands of species of insect, bird, mammals and plants – our biodiversity.
